Subject: [EXTERNAL] Recommissioning the Spencer ave fire station

To whom it may concern,

Living up on cloud view rd, I look out at the dead wood in the headlands and alongside 101 and can visualize a potential fire starting in the headlands and jumping across the highway as occurred in Santa Rosa. If 101 is engulfed in flames, what is the city's evacuation route either north or south since all roads lead to 101??? A timely response is critical to mitigating disaster for our town.

Also, living high up the hill where the winds can be ferocious and where above ground pge wires can be downed, I am acutely aware that the risk of fires stemming from pge wires is real. Approximately 5 yrs ago in early January , the pge wires in front of my house came down during a very high wind storm. The transformer continued to send power down the line until the fire dept responded and communicated the situation to pge. There was no automatic shut-off!!! A disaster was averted because the wire came down on the asphalt as opposed to a more flammable structure but it could have been a disaster!

While I cannot attend tonight's planning commission mtg, I hope serious consideration will be given to restoring the Spencer Ave structure to its original purpose of mitigating fire risk. This seems more urgent than ever!

Thank you.

Vivian Wohl

94 Cloud View Rd.
